

Revised List of Wild Species Stocks

Chetelat, R. T.

**C.M. Rick Tomato Genetics Resource Center, Dept. of Plant Sciences,
University of California, One Shields Ave., Davis, CA 95616**

The following list of 1,196 accessions of wild tomatoes and allied *Solanum* species is a revision of the list published in TGC vol. 57, 2007. Other types of TGRC stocks are catalogued in TGC 58 (monogenic mutants) and TGC 59 (miscellaneous stocks). Inactive accessions have been dropped and new collections added to the present list. The new material includes populations of wild or feral cherry tomato (*S. lycopersicum* 'cerasiforme') from Mexico (LA4352, LA4353), a stock of *S. pimpinellifolium* containing the *sun* gene introgressed from *S. lycopersicum*, and populations of *S. peruvianum* from the Azapa valley of northern Chile (LA4445-LA4448).

Seed samples will be provided, upon request, for research, breeding or educational purposes. Some accessions may be temporarily unavailable for distribution during seed multiplication. In general, only small quantities of seed will be provided: 25 seed per accession for the self-pollinated accessions, 50 for the outcrossers or facultative accessions, and 5-10 for the allied *Solanum* species. These seed samples should be sufficient for researchers to produce larger quantities of seed, if needed. Accessions are grown for seed increase in the UC-Davis greenhouses, except for cherry tomatoes and certain populations of *S. pimpinellifolium*, which are grown in the field. The population sizes used for seed multiplication depend on the mating system, and are designed to maintain genetic diversity within accessions (see guidelines at <http://tgrc.ucdavis.edu>).

The following tables are ordered by species name, using the classification system of Peralta et al. (2008)¹, but with the equivalent *Lycopersicon* names listed as well. Although only brief collection site data can be presented here, more detailed records are available from our website, including geographic coordinates, images, and donor information. An appendix table lists the accessions belonging to the core subsets for each species.
